Summary

Aspiring AI Engineer pursuing B.Tech in Computer Science with a strong foundation in Python, data analysis, and machine learning. Currently learning Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), embeddings, vector databases, prompt engineering, and AI application development. Hands-on experience with Python, Pandas, NumPy, Scikit-learn, REST APIs, and full-stack development using the MERN stack

Experience

Webmyne Systems Pvt. Ltd

Vadodara, India

AI Intern

06/2026 - Present

- Working with AI and Generative AI technologies to develop intelligent applications
- Building hands-on experience with Python, machine learning, and LLM-based solutions
- Learning industry practices for AI development, prompt engineering, and model integration
- Collaborating with the development team to build and improve AI-driven features

Shivaansh Technologies

Ahmedabad, India

MERN Stack Intern

05/2024 - 08/2024

- Developed MERN stack applications integrating REST APIs and MongoDB for efficient data handling
- Developed and maintained full-stack web applications using the MERN stack
- Built and integrated REST APIs for seamless frontend-backend communication
- Worked with MongoDB for data storage, retrieval, and optimization
- Collaborated on feature development, debugging, and application improvements
- Used Git for version control and team collaboration

Education

ITM (SLS) Baroda University (ITMBU)

Vadodara, India

B.Tech CSE | CGPA: 8.88 / 10.00

07/2024 - 04/2027

ITM (SLS) Baroda University (ITMBU)

Vadodara, India

Diploma in CSE | CGPA: 8.85 / 10.00

06/2021 - 04/2024

Shree Narayan Vidhyalaya

Vadodara, India

10th | %: 86.14 / 100.00

03/2020 - 05/2021

- 95 percentiles

Skills

Python • NumPy • Pandas • Machine Learning • LLMs • RAG • React.js • Node.js • Git • MERN

Projects

HyunAI - AI-powered Hyundai Knowledge Assistant (LLM + RAG)

• Python | FastAPI | React | ChromaDB | Ollama (Mistral 7B) | BGE-M3 | RAG | SQLite

Developed a full-stack Retrieval-Augmented Generation (RAG) chatbot for Hyundai vehicle assistance using React, FastAPI, ChromaDB, SQLite, and a local Mistral 7B LLM via Ollama

- Designed a dual-stage AI pipeline with LLM-based intent extraction, semantic retrieval, reranking, and grounded response generation to reduce hallucinations
- Implemented semantic search using BAAI/bge-m3 embeddings and cross-encoder reranking for accurate FAQ retrieval from an Excel knowledge base
 - Built multi-turn conversation memory, vehicle validation, comparison engine, booking workflow, and intelligent follow-up handling
 - Designed an incremental blue-green knowledge synchronization pipeline enabling zero-downtime updates from Excel to ChromaDB
 - Developed a JWT-secured admin dashboard for visitor analytics, booking management, chat monitoring, and knowledge synchronization

Projects

Wanderlust – Full-Stack Travel Listing Platform

React.js | Node.js | Express.js | MongoDB | Cloudinary | Map APIs

- Developed a full-stack travel listing platform enabling users to create, edit, search, and manage travel destinations with a responsive UI and secure authentication.
 - Implemented JWT/session-based authentication, authorization, and role-based access control to protect user accounts and listings.
 - Integrated Cloudinary for image upload and management, allowing users to attach high-quality images to listings.
 - Built RESTful APIs with Node.js and Express.js, using MongoDB for persistent storage of users, listings, and reviews.
 - Added search, review, and rating functionalities to enhance user engagement and travel discovery experience.
 - Deployed the application with cloud-hosted services, providing an end-to-end production-ready full-stack solution.

RepairDesk – Laptop Repair & Service Management Platform

React.js | Node.js | Express.js | MongoDB | JWT | REST APIs

- Developed a full-stack repair service management platform to streamline laptop repair operations, customer management, technician workflows, and inventory tracking.
 - Built secure role-based authentication for Admin, Technician, and Customer with JWT-based authorization.
 - Developed an end-to-end repair workflow including repair requests, technician assignment, status tracking, and service history.
 - Implemented inventory management, spare-parts tracking, billing, and invoice generation through a centralized admin dashboard.
 - Designed analytics dashboards to monitor repair requests, technician performance, revenue, and operational KPIs.
 - Built scalable REST APIs with a modular backend architecture for seamless frontend-backend communication.
 - Optimized database design for customer records, repair history, inventory, and billing to support efficient service operations.
